

Appendix C Snow Ridge Costing

The table below explains the manpower and equipment cost of creating snow ridges at known trouble spots over the last three winter seasons. It took one well trained grader-operator and a grader approximately three shifts to create the snow ridges and approximately seven shifts to add or maintain these snow ridges every winter with an average to below average snow fall.

The creation of snow ridges does not typically occur until the second or third snow fall of a season so that enough snow has accumulated.

Snow Ridge Costing:

Labour	#	\$/Hr	Cost/Shift	#/Shifts during season		Cost for Season
				To create Snow Ridges	To maintain Snow Ridges	
Op IV/CL	1	\$27.22	\$272.20	3	7	\$2,722
O/H - 21%						\$571.62
Equipment						
Graders	1	\$45.00	\$450.00	3	7	\$4,500
Total Cost						\$7,794
