

Good Afternoon.

Regina has been my home for over 45 years. I would like to congratulate you all for endorsing our energy transition to become carbon-neutral by 2050, and, like many other citizens, I am willing to help guide this process as a professional geologist involved in the development of low carbon-generating alternatives - and we have many! I work in the low carbon energy space because I accept the findings of our climate scientists and believe that every individual can play a role in halting and reversing the predicted catastrophic rise in global temperature. Action starts at home, in Regina, and it is in all our best interest to make meaningful progress toward a low-carbon future. We have abundant renewable resources at our disposal plus the ability to store this energy on a grid-scale basis. I encourage you all to support the energy and sustainability strategy on October 28.

Respectfully yours,

Brian Brunskill
