## Halliburton Group Canada

**Re: 100 McDonald Street, Regina, SK, S4N 5V9**

September 18, 2013

Halliburton Group Canada has acquired the above noted facility to serve as a central operational base for providing Oil and Gas Services to our clients in Saskatchewan and Manitoba, bringing in 100+ jobs to benefit local residents and businesses alike.

In fulfilment of the relevant provisions of *The Hazardous Substances and Waste Dangerous Goods Regulations*, please find below a summary of information (fact sheet) on Halliburton's Regina Facility:

Halliburton provides Well Stimulation and Coil Tubing operations out of the facility, which includes providing chemicals directly to our customers to complete operations on lease locations owned and operated by Oil/Gas Companies. These include: water treatment microbiocide, organic peroxides, liquid gel concentrates, organic acids and other additives. A comprehensive list of all chemicals on site, together with their Materials Safety Data Sheets (MSDS), has previously been provided to the City of Regina and is available at the Halliburton Regina Facility.

The chemicals will be stored in a 9000 ft<sup>2</sup> stand-alone chemical storage building located in the center of our 8.8 acre property. The building is constructed of metal claddings with fire-proof gyproc on the interior of the warm storage side, and metal interior on the cold storage side, all on concrete pad. All chemicals are stored in appropriate, approved containers as provided by the manufacturers. Empty containers and unused portions of chemical products that are returned to the facility are stored in appropriate containers with secondary containment, and are disposed of by approved 3<sup>rd</sup> Party contractors in accordance with applicable provincial regulations.

The building has been equipped with spill containment kits, and is being fitted out with a forced-air ventilation system, appropriate secondary containments, fire alarm and suppression systems as part of the emergency response plan. Halliburton has similar chemical storage facilities in Saskatchewan and Alberta, including Estevan, Red Deer, Medicine Hat, Lloydminster, Grand Prairie and Onoway.

The facility does not produce, consume or process chemicals. As a part of our operations, the building provides storage for chemicals that are being transported to and used in field operations. Halliburton does not store any flammable fuels (gasoline, diesel, LNG/LPG) or hazardous gases of any type (ammonia, chlorine etc.) on site.

For further information or concern, please contact the Facility Manager on (306) 737-7155 or by email at Ron.Hunter@Halliburton.com.

### *About Halliburton*

*Founded in 1919, Halliburton is one of the world's largest providers of products and services to the energy industry. With more than 75,000 employees, representing 140 nationalities in approximately 80 countries, the company serves the upstream oil and gas industry throughout the lifecycle of the reservoir – from locating hydrocarbons and managing geological data, to drilling and formation evaluation, well construction and completion, and optimizing production through the life of the field. Visit the company's website at [www.halliburton.com](http://www.halliburton.com)*
